

# XCELL THERAPY

**PH: 08 8260 7044**

**AMA HOUSE**

**Suite 2, 161 Ward Street**

**North Adelaide SA 5006**

## WHAT IS XCELL THERAPY?

XCELL therapy is revolutionary treatment that uses blood derived cells to promote healing. It may enhance appearances and wellbeing.

The cells are harvested from a vein similar to donating blood. After being processed in the lab, the isolated and activated cells can be injected into the site of injury. As XCELL therapy uses only your own blood cells, there is no risk of allergic or foreign body reactions.

## HOW DOES IT WORK

XCELL therapy releases concentrated and activated cells that induce healing and promote regeneration.

**XCELL MAY BE A TAX DEDUCTION FOR  
THE  
SELF EMPLOYED, THE EMPLOYER OR  
EMPLOYEE**

## SPECIFIC TREATMENT BY XCELL THERAPY

- Arthritis of knees and other joints
- Tendons – patella tendon, hamstring tendon, adductor tendon, tennis and golfer's elbow
- Low Back – treating disc degeneration

### **PREPARING FOR YOUR APPOINTMENT**

- Eat healthily and drink plenty of water
- Stop taking any anti-inflammatories or blood thinners medication (consult with your doctor)

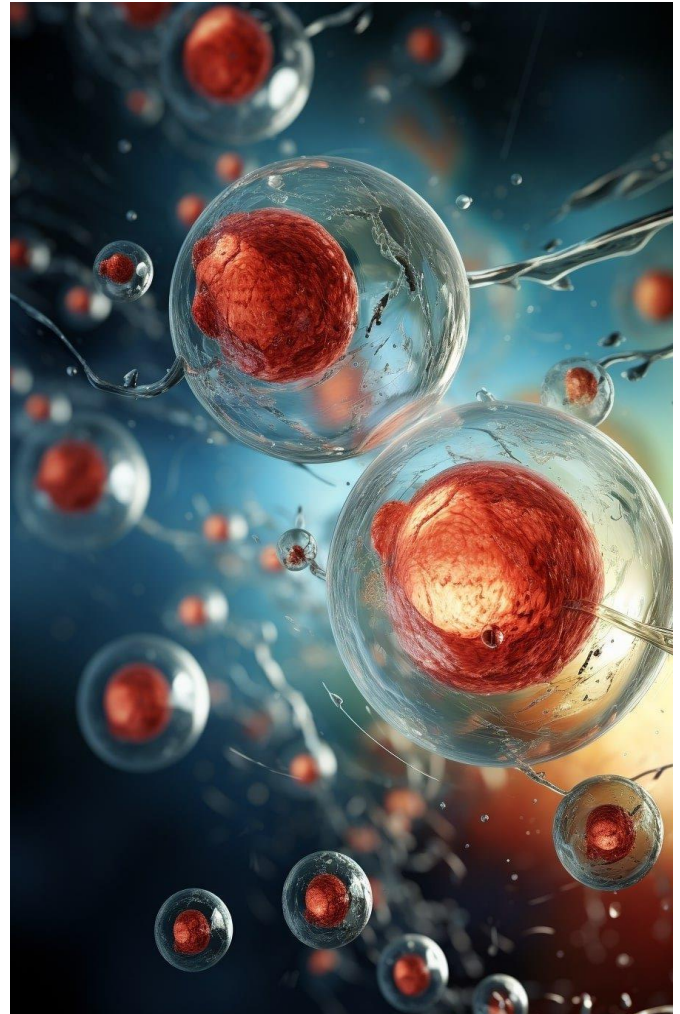

### **AFTER TREATMENT**

- Drink water and eat healthy foods
- Avoid any form of physical exertion that causes sweating or strain on the heart

### **PLEASE NOTE**

There are rare cases where a patient who has arrived at the clinic must be denied treatment of a medical problem. Conditions include infections and cancer.

We do not recommend XCELL therapy if you have had cosmetic Botox treatments in the past 2 months as it may reverse the effect of Botox.
